

Protecting the World's Critical Infrastructure

As an increasing amount of services transition to online platforms, striving for efficiency and speed to establish superiority, the evolution of your security posture becomes imperative. The attack surface has expanded significantly, and ostensibly harmless file attachments are now being modified to conceal malicious payloads. How can you leverage the advantages of the digital era while ensuring paramount security? F5 has collaborated with Opswat to provide the solution...

The integration is remarkably straightforward to implement, requiring no specialised code or APIs, as it operates seamlessly on the standard ICAP protocol. You can leverage additional security services through simple software upgrades, offered by top vendors in the market. For further insights, watch the video featuring Buu Lam from F5 Dev Central fame:
