## VERITAS
The truth in information.

Top reasons to choose Veritas Resiliency Platform for disaster recovery of multi-cloud environments.

Today's enterprises deploy applications and services across multiple cloud platforms to gain agility and cost-efficiency. But doing so can complicate disaster recovery. Veritas Resiliency Platform recovers applications, VMs, data and more—wherever they reside—so you can move confidently from on-premises to cloud, according to business needs.
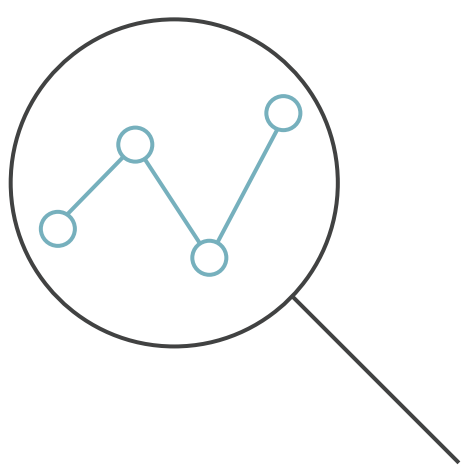

Enjoy broad infrastructure support.

Choose the only multi-cloud platform that supports physical, virtual or cloud-based infrastructures and offers a choice of popular data mover technologies.
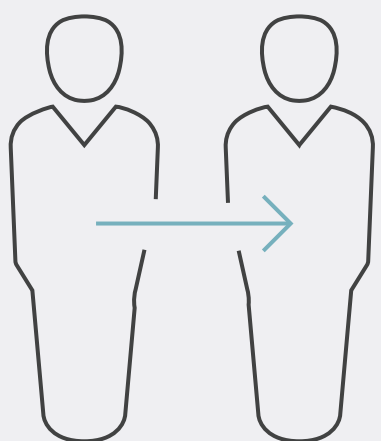

Get back to business quickly.

Use a policy-based solution that matches business applications with infrastructure components regardless of location, so you get up and running—fast.

Ensure data integrity.

Get your applications and associated services back online quickly with automated sequencing of workload shutdown and startup.

Leverage non-disruptive rehearsals.

Preserve production up-time and validate your investment with automated simulation of migration and takeover procedures.

Gain comprehensive reporting.

Stay up-to-date on the resiliency of your business, prove audit compliance and make informed decisions with historical and real-time data points.
